HoCoGro Compost

[HoCoGro STA Certified Compost](#) is a soil amendment registered with the Maryland Department of Agriculture. It is regularly laboratory tested. Here are the [latest lab results](#). Mixed into soil, compost adds nutrients, organic content and makes the soil more workable and retain moisture. These are all qualities that chemical fertilizers normally can't do.

HoCoGro Mulch

HoCoGro mulch is a naturally colored, double-ground mulch is excellent for top dressing your garden. Unlike some dyed mulches, this product will not steal nitrogen from your beds. We recently changed our grinding process to make a more uniform-sized mulch.

Blended Topsoil

Our topsoil is a mix of soil and HoCoGro Compost. The compost addition makes it workable and able to retain moisture. Topsoil by definition is the top four inches of soil which includes the dark first inch and the often clay-like, pale remaining three inches. By blending compost into the topsoil, the organic matter content in the soil is raised to 5%-9%, and billions of soil-enhancing microbes are added.
