

**Howard County
Construction and Demolition Debris
Recycling Guide**

2023

**Howard County
Bureau of Environmental Services**

About this Guide

Companies listed in this guide should not be construed as a recommendation or endorsement by Howard County Government. This guide was developed to assist with available options other than traditional waste disposal. With the growth of “green buildings,” contractors now face an increased demand by clients to recycle more building material, both demolition debris and new scrap.

Please keep in mind when using this guide that the construction and demolition (c&d) debris recycling industry is constantly changing. Some businesses may have reduced or expanded the types of materials they accept depending on market and regulatory conditions. Always call ahead or consult company websites to check material specifications and to find out the terms and conditions required. This guide includes material originally published by the Northeast Maryland Waste Disposal Authority and the Washington DC Metropolitan Council of Governments.

Using this Guide

Vendors are listed alphabetically by material. There are currently only a handful of facilities in Howard County that accept construction and demolition (c&d) debris for recycling. To recycle some materials, construction companies may need to travel outside the county. At the end of the materials listing is a list of companies that provide c&d waste demolition and hauling services. Finally this guide concludes with a list of websites that pertain to c&d debris recycling and green buildings.

Introduction

Over the past several years, interest in “green building” has grown at a rapid rate. Builders who wish to construct buildings that maximize the use of natural resources are participating in the US Green Building Council’s Leadership in Energy and Environmental Design (LEED) program. Buildings can be certified as LEED, Silver, Gold, or Platinum based on the number of points earned. One way that a builder can earn points is through recycling both demolition debris and new construction scrap. There are additional methods to earn LEED points through using materials that contain recycled content and by purchasing regionally produced materials as well as through energy and water conservation. This guide however, focuses on recycling construction and demolition debris.

Howard County Green Building Requirements

[Council Bill No. 47-2007](#), passed on July 30, 2007, establishes green building standards for public and private buildings in Howard County. Effective July 1, 2008:

- Most new publicly-funded buildings (30% or more County funding), larger than 10,000 square feet must attain a LEED Silver rating.
- Most new private buildings larger than 50,000 square feet must attain a LEED Certified rating.

For more information on LEED Certification for green buildings, please visit <http://www.usgbc.org/>
