

# SHEETFLOW TO CONSERVATION AREA: Operation and Maintenance

Stormwater runoff is effectively treated when flow from developed land is directed to adjacent natural areas where it can soak into or filter over the ground.

- Conservation areas shall remain undisturbed and unmanaged other than routine debris removal and repairing areas of concentrated flow. Invasive and noxious plant removal and bi-annual mowing for meadow areas may be needed. Signs delineating the limits of the conservation area should be maintained and supplemental plantings performed as needed.
