Health Officer’s Message

One of the fundamental goals of the Howard County Health Department is to promote habits that contribute to good health. Our primary focus areas of Healthy Aging, Healthy Weight, Behavioral Health and Access to Care endeavor to improve health outcomes and reduce health disparities throughout Howard County. We strive to make a positive and lasting impact in the lives of those we serve.

This report helps us to remain focused on our mission to promote, preserve, and protect the health of all in Howard County by monitoring our progress toward specific health-related goals. With the collective contributions of a dedicated public health team, we continue our commitment to effectively meet the needs of our community.

Maura J. Rossman, M.D.
Health Officer

**Total Medicare Hospital/Medical Enrollment, Howard County, August 2019: 47,543**

**Maryland Medicaid MCO Enrollment, Howard County, August 2019: 38,551**

---

Data Source: U.S. Census Bureau; Centers for Medicare & Medicaid Services; Maryland Medicaid eHealth Statistics, MDH.

In 2017, 1,655 Howard County residents died. The most common causes of death were cancer, heart disease and stroke.

Many of the associated risk factors are modifiable. Reductions in smoking, high blood pressure, overweight, obesity, physical inactivity, high dietary salt and high sugar consumption can lead to reductions in long-term disability and premature death.

Cancer Screening*, 2016

- 40% of all cancer cases are these 4 types
- 83.3% women age 50+ had a mammogram in the past 2 years to screen for Breast cancer
- 73.3% age 50+ ever had a sigmoidoscopy or colonoscopy to screen for Colorectal cancer
- 70.4% women had a Pap test in past 3 years to screen for Cervical cancer
- 53.4% men age 40+ ever had a PSA test to screen for Prostate cancer

Data Source: State Cancer Profiles, CDC, NCHS (annual averages). *Age-adjusted rates from Maryland BRFSS accessed 17 July 2019.
Overall from 2010 to 2017, the number of births to Howard County mothers has increased by 4.65%. The number of births among white mothers has declined, but has increased among black, Asian, and Hispanic mothers.

Infant mortality rates are highest among black mothers. With the increase in births among Asian mothers, there has also been an increase in preterm births and infant deaths.

Early prenatal care and education are critical components for healthy pregnancy outcomes.

Healthy People 2020 objectives were developed as a guide to measure improvement in the health of all Americans. One of its four goals is to “Promote quality of life, healthy development, and health behaviors across all life stages”.

Frequent review and comparison to the objectives allow communities to celebrate areas of strength but also to identify opportunities for improvement.
