Landscaping Notes:

Plant Material Selection:
1. The contractor shall furnish plant material in sizes and species specified in the plant schedules.
2. Material to be specified should meet or exceed the requirements of the American Nursery & Landscape Association's Plant Material Specification (ANLA 2003) and the National Retail Nurseries Association (NRNA) Specifi cations, particularly regarding the size, growth, size of the root ball, and density of the root structure.
3. All planting material shall be arranged to arrive within 100 miles of the site.
4. No submittal of plant material shall be made without the written consent of the Owner or Landscape Architect.
5. Deciduous trees shall only be developed branching and evergreen species shall be full.
6. The Landscape Architect or Owner shall have the right, at any stage of the operation, to reject any and all such material which, in the his or her opinion, do not meet the requirements of any of these plans and specifications. All rejected material shall be removed from the site by the Contractor.
7. See panel 3 for soil level for site, type, species, spacing, quantities and application rates.
8. Seed trays shall have a minimum purity of 85% and a minimum germination of 85% of planting trays. The seed mix is to be adequate to the soil and have less than 15% mix.
9. All12 species shall consist of mature stock.

Plant Material Transportation, Approval, & Storage:
10. Plant material shall be protected against frost, desiccation, and structural damage during transit to the site. The stock plant material shall be kept moist during transit from the source to the job site and until planted.
11. Plant material shall not be free of disease, damage, insect infestation, and vigor upon delivery to the site. All plants should be healthy and well-structured. No needed cold storage or controlled chill will be enforced. Plants in poor condition shall be rejected from the site and replaced with acceptable material.
12. Plant material shall be stored in a cool, shaded area on the site and kept moist to prevent desiccation. If stock material remains unprotected, it should be protected from direct sun and weather, and keep moist. Plant material shall not be left unsecured or exposed to the elements.
13. The contractor is required to obtain clear-waxed paper for use during planting operations and the subsequent maintenance.

Site Preparation:
14. The site and areas existing the IOD shall be treated for invasive species prior to the start of construction.
15. No clearing or grading shall begin before erosion reduction measures have been implemented. Such measures may include but not be limited to establishment of grasses, sod, permanent erosion control or planting, etc. All of the documentation of the plan, proposal, and/or subcontractor shall be reviewed and approved by the owner and/or landscape architect prior to the commencement of the project.
16. To prevent the spread of weeds, weeds, all soil shall screened and treated as an approved weed control for the project.
17. All areas that are to be removed must be removed in a manner that will not damage the surrounding trees. The Contractor shall keep area protected from the plant and root injury. Any area required for the removal of trees shall be the responsibility of the contractor and as required by the state or local authorities.

Planting Schedule:
18. Any plant material shown on the Site Plan that is subject to planting should be planted during the current growing season, prior to the commencement of the planting season, site preparation, grading, or erosion control measures shall be planted in the time of year that is recommended for that species. The Contractor shall notify the owner of any change in material that requires that the planting season be changed.
19. The contractor shall submit a planting schedule for the project.
