B-3835 Henryton Road over Tributary to Patapsco River Bridge Replacement

Thank you for attending this public meeting. If you have any comments, please email Mr. Jake Weir with DPW Transportation and Special Projects Division at jweir@howardcountymd.gov

*Be sure to fill out
comment sheets!*

PURPOSE AND NEED

- The replacement structure will increase the structural capacity and remove the current load posting restriction of the existing bridge.
- The replacement structure and approach roadways will be widened by approximately 5' to accommodate wider shoulders and provide safer access along Henryton Road.
- The replacement structure will be lengthened to increase the hydraulic capacity and minimize local flooding of the bridge over Tributary to Patapsco River.

KEY PROJECT INFO:

- Project includes replacement of sub-standard, flood-prone bridge along Henryton Road over Tributary to Patapsco River.
- Proposed structure will be a single-span precast prestressed concrete beam bridge with a span length of 51'-6" and a 30'-11 1/2" width.
- Project includes approach roadway improvements and removal and replacement of existing traffic barrier.
- This project is expected to begin construction in the Spring of 2023.
- Overall project cost is estimated at \$1.7M.
- Henryton Road will remain open to traffic during construction. Traffic will be diverted onto temporary bypass road adjacent to existing bridge until construction is complete.
- Following bridge construction, existing utilities will be permanently relocated and the existing bypass road adjacent to Henryton Road will be removed.
